

# H PILE DRIVER SHROUD

The Hushtec pile attachment was designed specially to mitigate noisy piling works in or around residential areas or build up noise sensitive environments. The innovative design helps to reduce that is emitted out of the steel cylindrical piles during impact.

Noise reduction technologies must be practical to use as well as being effective. The Hushtec Pile Driver Shroud ticks all the boxes. It is quick and easy to fit, dramatically reducing noise during pile driving operations.

It is also functional, allowing operators full visibility during the piling process.

We can customise our Pile Driver Shroud according to your requirements. This includes printing your logo and branding onto each rig. We also offer fully customised pile driver shroud solutions.

If you need something unique, get in touch with us to arrange a consultation with a member of our experienced team.

## HUSHTEC<sup>®</sup>

Your global leader in the development and manufacturing of noise control solutions and technologies.
